ROUGH TOP CONVEYOR BELTS

An aerial photograph of a large-scale industrial facility, likely a mining or material processing plant. The image shows a complex network of conveyor belts supported by metal structures, winding across a landscape. There are several large, circular or oval-shaped piles of material, possibly coal or ore, some of which are covered with dark tarps. The background features a line of trees and a hazy sky, suggesting an outdoor, possibly hilly or mountainous, environment. The overall scene is one of active industrial operations.

Rough Top impression on top cover gives high friction between belt surface and material carried on it such as cement / fertilizer bags.

Rough top belts are used for transferring bags from one point to another with high inclination angle.

These belts are used at loading points.

Normally these belts are with bare bottom construction but some customer prefers with normal bottom cover.

Reinforcing Material: NN/EP

Width: 800 mm max

Length: Endless as per order

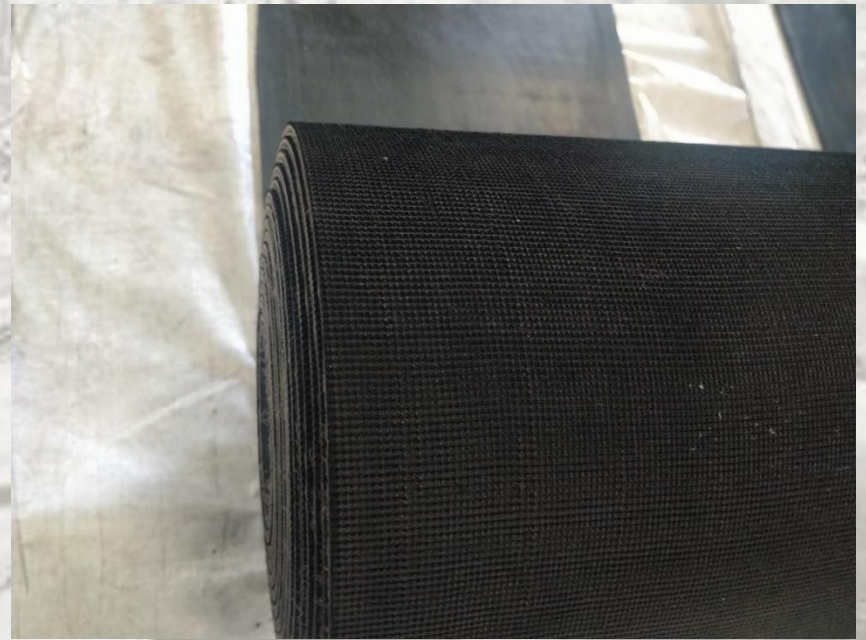

Open end as required
